PROFESSIONAL PROFILE

Frontend Engineer experienced in building UI-heavy applications using Angular, React, and React Native. Developed reusable component systems, implemented design systems, and delivered responsive interfaces across enterprise dashboards, POS platforms, and customer-facing applications. Redesigned POS workflows by identifying usability gaps, creating Figma prototypes, and translating designs into production-ready interfaces using React and modern frontend practices. Hands-on experience with TypeScript, JavaScript, SCSS, PrimeNG, Angular Material, and AI-assisted development workflows. Comfortable working in Agile teams, collaborating across design, product, and engineering stakeholders, and contributing to frontend architecture decisions from design through implementation.

SKILLS SUMMARY

Frontend

Angular 2+, React, React Native, JavaScript, TypeScript, HTML5, CSS3, Bootstrap, Tailwind CSS, Scss

Libraries

Material UI, gluestack-ui, Angular Material, PrimeNg, Ag Grid, Figma

Workflow & Tools

Git, GitHub, Jira

Deployment & CI/CD

GitHub Actions, Hostinger

AI Assisted Development

ChatGPT, Claude

WORK EXPERIENCE

Frontend & Mobile UI Developer,

01/2025 – Present | Portland, OR

Lumovy Technology Solutions (formerly Illumina Technology Solutions)

- Redesigned key ecommerce and POS workflows by identifying usability improvements, creating Figma prototypes, and implementing production-ready interfaces aligned with business requirements.
- Designed and implemented UI enhancements for client demonstrations, adapting Microsoft Dynamics 365 Commerce experiences through CMS configurations and frontend code customizations while adhering to Microsoft's extension guidelines.
- Developed 25+ reusable React Native components for a Microsoft Dynamics 365 Commerce mobile application implementation, ensuring consistency across user flows and improving development efficiency.
- Translated Figma designs into responsive, production-ready interfaces while maintaining consistency between design intent and implementation.
- Built reusable UI components and utility functions to support scalable frontend development and reduce duplicated implementation efforts.
- Leveraged AI-assisted development workflows using ChatGPT and Claude to accelerate implementation, validate approaches, and improve delivery efficiency while maintaining code quality.

Consultant Frontend Engineer, PartnerlinQ (Visionet Systems)

03/2022 – 01/2025 | Lahore, Pakistan

- Served as one of two frontend specialists responsible for designing, implementing, and maintaining UI experiences across multiple enterprise applications.
- Led the UI migration effort from Angular Material to PrimeNG, rebuilding existing components, standardizing behavior, and aligning interfaces with updated design requirements.
- Designed and implemented a reusable SCSS mixin-based styling system that enabled dynamic utility-style classes, improving consistency and reducing repetitive styling across applications.
- Developed new reusable components and enhanced existing ones to support evolving business requirements while maintaining a cohesive user experience.
- Redesigned and refined dashboard interfaces and user flows to improve usability, information hierarchy, and overall user interaction.
- Identified and resolved UI inconsistencies across applications by standardizing frontend patterns and improving component maintainability.
- Collaborated closely with engineering and product teams to translate business requirements into scalable, production-ready frontend solutions.

Junior Consultant Frontend, Systems Limited

07/2021 – 03/2022 | Lahore, Pakistan

- Implemented UI for enterprise applications using HTML5, CSS (Sass) and JavaScript to match Figma designs, creating consistent layouts and reusable components, which streamlined development and reduced design revisions
- Handled common UI issues such as layout misalignment, inconsistent spacing, and component reuse across modules
- Collaborated with designers and developers to refine interfaces and improve overall usability
- Gradually took on more responsibility in structuring UI components and maintaining consistency across screens
- Completed multiple internal projects to meet yearly objectives and client requirements.

PROJECTS

Amigos Aura, <https://amigosaura.com/>

11/2025 – Present

- Built a UI-focused website from scratch with emphasis on layout balance and clean visual structure
- Used AI-assisted development to speed up iteration and refine styling and component structure
- Set up GitHub Actions for deployment and handled hosting setup on Hostinger
- Maintained consistency in spacing, typography, and overall UI presentation across sections
- Focused on delivering a smooth and visually coherent experience across devices

Amigos Overseas Education, <https://amigosoverseaseducation.com/>

09/2025 – Present

- Built the frontend UI from scratch for a content-heavy website where information needed to be structured clearly for users
- Used AI tools (ChatGPT, Claude) as part of the development workflow to iterate faster, explore layout approaches, and refine implementation
- Set up deployment pipeline using GitHub Actions and deployed the site on Hostinger, handling the process end-to-end
- Structured layouts to keep navigation intuitive and reduce content clutter across pages
- Ensured responsive behavior so the site remained usable across devices

EDUCATION

BSc. (Hons.), Computer Science,

2021 | Lahore, Pakistan

FAST - National University of Computer and Emerging Sciences, Pakistan

Achievements: Successfully built a mobile application to suggest songs based on mood captured from selfies
