PROFESSIONAL SUMMARY

Frontend Engineer specializing in UI-heavy applications using Angular, React, TypeScript, and modern component libraries. Experienced in improving complex interfaces, building reusable component systems, modernizing frontend foundations, and taking UI changes from Figma through production implementation. Strongest where frontend engineering and UI/UX overlap, with hands-on work across enterprise platforms, dashboards, ecommerce, POS, healthcare, mobile applications, and customer-facing products.

SKILLS

Languages TypeScript, JavaScript (ES6+), HTML5, CSS3, SCSS	Frontend Frameworks Angular, React	UI Libraries PrimeNG, Angular Material, Material UI, AG Grid, gluestack-ui	Styling Tailwind CSS, Bootstrap, Responsive Web Design
Design and UI Figma, UI/UX, Design Systems	Development and CI/CD Tools Git, GitHub, GitHub Actions, Jira, Hostinger	AI Assisted Development ChatGPT, Claude, Codex	Platforms Microsoft Dynamics 365 Commerce, CMS-driven Commerce

WORK EXPERIENCE

Software Developer II 01/2025 – Present | Portland, OR
Lumovy Technology Solutions (formerly Illumina Technology Solutions)

- Redesigned ecommerce and POS workflows by identifying usability bottlenecks, creating Figma prototypes, and implementing production-ready interfaces that simplified navigation and improved the overall user experience.
- Designed and implemented UI enhancements for Microsoft Dynamics 365 Commerce client demonstrations, adapting CMS configurations and frontend extensions to showcase customer-specific workflows while following Microsoft's extension guidelines.
- Established reusable mobile UI patterns for a Microsoft Dynamics 365 Commerce implementation by developing 25+ React Native components, reducing repeated implementation and maintaining consistent behavior across the application.
- Improved design-to-development consistency by translating Figma specifications into responsive, accessible interfaces using reusable components and shared implementation patterns.
- Built reusable UI components and utility functions to reduce duplicated implementation, improve consistency across screens, and simplify future feature development.
- Leveraged AI-assisted development workflows using ChatGPT, Claude, and Codex to accelerate prototyping, validate implementation approaches, and improve development efficiency while maintaining code quality.

Consultant Frontend Engineer, PartnerlinQ 01/2024 – 01/2025 | Lahore, Pakistan

- Modernized the platform's UI foundation by leading the migration from heavily customized Angular Material components to PrimeNG, reducing reliance on legacy overrides and making future UI development easier to maintain.
- Reduced repetitive styling by designing an SCSS mixin-based utility system that introduced reusable utility-style classes without requiring the product to adopt an additional styling framework.
- Modernized reusable components and frontend patterns to improve maintainability, standardize implementation, and create a more scalable UI foundation across multiple enterprise applications.
- Continued refining dashboard experiences and user workflows by reducing visual clutter, improving information hierarchy, and making complex business processes more intuitive.
- Became one of the primary UI engineers responsible for implementing new features, redesigning existing interfaces, and maintaining a consistent design language across the PartnerLinQ platform.
- Contributed to frontend technical direction by improving component organization, styling patterns, and long-term maintainability while delivering production-ready enterprise interfaces.

Junior Consultant Frontend, PartnerLinQ (Systems Limited) 01/2023 – 12/2023 | Lahore, Pakistan

- Took ownership of frontend implementation across multiple enterprise portals, delivering new features while modernizing existing interfaces to improve usability and maintainability.

- Developed reusable UI components and refined existing ones to support evolving product requirements while reducing design inconsistencies across the platform.
- Redesigned dashboard layouts and user flows by simplifying complex interfaces, improving information hierarchy, and making enterprise workflows easier to navigate.
- Extended Figma designs into production interfaces while identifying and addressing usability and responsive design issues not always covered by the original specifications.
- Established consistent frontend implementation patterns that reduced one-off solutions and created a stronger foundation for future enhancements.

Associate Consultant Frontend, Systems Limited

07/2021 – 12/2022

- Implemented responsive interfaces using Angular, HTML, SCSS, and JavaScript, translating Figma designs into clean, production-ready user experiences.
- Built reusable UI components and standardized layouts that improved consistency across the application and reduced repetitive implementation.
- Identified and resolved UI inconsistencies, improving visual cohesion and usability across multiple modules.
- Transitioned to the PartnerLinQ product team toward the end of this role, taking on increasing ownership of product-facing frontend development as the platform continued to expand.

PROJECTS

Teledental , Frontend Developer | 2024

- Modernized the frontend of an existing healthcare platform built with React and TypeScript, introducing an updated design language that improved visual consistency and created a more intuitive experience across patient consultations, appointment scheduling, and treatment management.
- Reworked existing interfaces using React, Bootstrap, and Ant Design, improving responsiveness, component consistency, and overall usability while preserving existing platform functionality.
- Refined reusable UI components and styling patterns to establish a cleaner, more maintainable frontend foundation for future enhancements.

Soletechs, Frontend Developer

09/2023 – Present

- Developed the frontend ecosystem using Angular, TypeScript, SCSS, and Bootstrap, building the public marketing website alongside enterprise administration modules for HRM, resource management, and business operations.
- Designed and implemented responsive administrative interfaces from scratch, creating reusable layouts and UI patterns that supported future module expansion and improved frontend maintainability.
- Built responsive HTML email templates for authentication, notifications, and business workflows, ensuring consistent branding and user communication across the platform.
- Structured the frontend architecture around reusable components and scalable styling patterns, providing a consistent foundation across both public-facing and internal applications.

Amigos Overseas Education, <https://amigosoverseaseducation.com/>

09/2025 – Present

- Built the company's marketing website from scratch using React, TypeScript, SCSS, and Vite, translating business requirements into a responsive experience that simplified navigation through study abroad services, destinations, and admission guidance.
- Implemented reusable UI sections and responsive layouts that maintained consistency across desktop, tablet, and mobile devices.
- Integrated functional contact forms and established an automated deployment workflow using GitHub Actions, managing production deployments through Hostinger.
- Leveraged ChatGPT, Claude, and Codex throughout development to accelerate implementation, iterate on interface designs, and improve development efficiency.

Amigos Aura, <https://amigosaura.com/>

11/2025 – Present

- Built the company's marketing website from scratch using React, TypeScript, SCSS, and Vite, delivering a responsive frontend centered around clean visual hierarchy and a polished brand experience.
- Developed reusable frontend sections and styling patterns that simplified future enhancements while maintaining consistency throughout the website.
- Implemented functional contact forms and managed automated deployments using GitHub Actions and Hostinger, streamlining production releases.
- Utilized ChatGPT, Claude, and Codex throughout development to rapidly prototype, refine layouts, and accelerate frontend implementation while maintaining code quality.

EDUCATION

BSc. (Hons.), Computer Science

2021 | Lahore, Pakistan

FAST - National University of Computer and Emerging Sciences, Pakistan

Achievements: Successfully built a mobile application to suggest songs based on mood captured from selfies
